100mA / 50V Digital transistors (with built-in resistors)

DTC123JM / DTC123JE / DTC123JUA DTC123JKA / DTC123JSA

Applications

Inverter, Interface, Driver

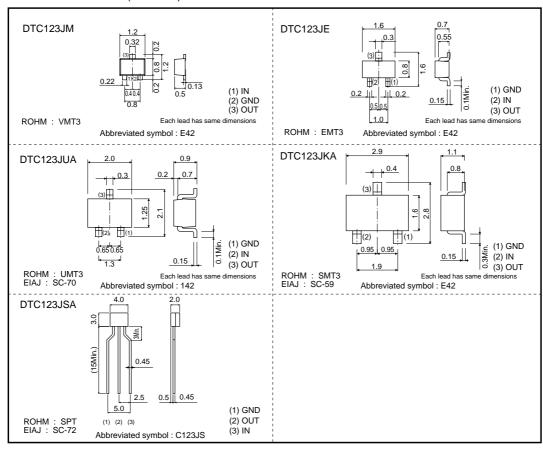

Features

- 1) Built-in bias resistors enable the configuration of an inverter circuit without connecting external input resistors (see the equivalent circuit).
- 2) The bias resistors consist of thin-film resistors with complete isolation to allow negative biasing of the input. They also have the advantage of almost completely eliminating parasitic effects.
- 3) Only the on / off conditions need to be set for operation, making the device design easy.
